

## ¡NanoDays llega a Puerto Rico!

Posted on March 14th, 2008 in **Uncategorized** by O. Marcelo Suárez

Ven a conocer el nanomundo, el mundo de lo más pequeño, en la Universidad de Puerto Rico.

### NanoDays

Students compare diameters of nanofibers and human hair using SEM at UPR-Humacao

▪ NanoDays

The biggest help . . . was the encouragement from NISE to do combined events between museums and universities. This was truly the reason our event was so successful.

-DaVinci Science Center, Allentown, PA

It worked really well for us to have university students who were knowledgeable about nanotechnology conducting the demonstrations and activities. They enjoyed interacting with the public, and the visitors appreciated how well the students were able to explain nanotechnology topics to them and to their children.

-Palouse Discovery Science Center, Pullman, WA

The connections with local researchers created a value for our visitors and drew non-traditional visitors to the Center. . . . NanoDays is a rare and valuable opportunity to bring visitors to the frontiers of current science research.

-Don Harrington Discovery Center, Amarillo, TX
