

NCN Users Session

Gerhard Klimeck

Director, nanoHUB.org, Network for Computational Nanotechnology
Professor of Electrical and Computer Engineering, Purdue University

nanoHUB.org provides an online meeting place for simulation, research, collaboration, teaching, learning, and publishing. Without the installation of any software, users run over 260 simulation tools, authored by over 300 developers, from a web browser in a scientific computing cloud. nanoHUB provides a library of over 3,400 seminars, tutorials, courses, podcasts, and other resources published by over 1,000 contributors. Annually, over 240,000 users participate in nanoHUB. Its impact is demonstrated by over 940 citations to nanoHUB in the scientific literature and 5,400 secondary citations, yielding an h-index of 44. Cumulatively, nanoHUB simulation tools have been used in over 760 formal classes at 185 institutions by 14,000 students. The strategy for delivering the next-generation nanoHUB experience will include the development of technologies that enable simple management and publication of experimental and simulation data and the establishment of a value system that fosters publication of data, tools, and lectures. In this session, the nanoHUB leadership will seek input from other centers on these areas.
