National Nanotechnology Coordinated Infrastructure

Abstract

This presentation provides an overview of the NSF-funded National Nanotechnology Coordinated Infrastructure (NNCI), a network of 16 academic sites and their partners distributed across the US. The NNCI provides access to state-of-the-art nanotechnology tools and staff expertise, and supports associated programs for education, outreach and societal implications of nanotechnology. We will give an overview of current network resources and highlight select new initiatives planned for the second five-year period of the NNCI program (2020-2025). The presentation will also describe the impact of the NNCI by looking at user statistics, enabled nanotechnology research, as well as economic impact.
